+ Content

- Producer certificate for the content of substance and levels, which has allowed an assessment against the level recommended for the respective quality of criterion
- The product does not contain any nanomaterials

+ Life cycle

1. Materials and raw materials

- Data on raw materials are reported in part. For more information, see the submitted documents.
- ≥ 50 % renewable raw materials
- Product of wood from forestry where information on sustainability is missing.

2. The manufacture of the product

- Data on emissions not available. The information is optional to report in BVD.
- Information is presented on energy use. For more information, see the submitted documents.
- Data not available on product residues. The information is optional to report in BVD.

3. Transportation and packing

- Information is presented on transportation (modes of transport as well as shares)
- Data available about the country for final manufacturing of the product.
- Information is provided on the packaging

4. Production stage

- The products life cycle of is about 25 years or longer.

5. Waste and demolition

- Reuse is not possible for ≥ 50 % of the product.
- Recycling is feasible for ≥ 50 % of the product.
- The product does not generate hazardous waste.
- End-of-life product is not classified as hazardous waste.

6. Indoor environment (Only relevant for products for indoor use).

- Details can be found on the emission rate for the five highest peaks of VOC

Formaldehyde <0.05 mg/m3.

TVOC-content <200 µg/m3.

Complies even with requirements for
