

Organoid® Collection Book – Extension Kit

You will need:

- ✓ The Collection Book list by Organoid
- ✓ 8 samples (perforated, printed)
- ✓ 3 book screws with 6 washers
- ✓ Scissor
- ✓ Slotted screwdriver

Instruction:

1. Remove the **cord binding** of the collection book.
2. Place the samples of the **five new surfaces** in the book and exchange the samples of the **three surfaces on flax fleece light** - according to the Organoid **collection book list**. Pay attention to the correct order. Note: Depending on the book batch, the surfaces, numbers, sequences and formats of the patterns may vary slightly.
3. Take the **book screws and washers**. Loosen the screws so that you have two pieces. Thread a **washer** through the long part of the book screw. Then thread it through the hole in the binding from the front of the book. Make sure to match the holes of all the samples.
4. Turn the book over so you can see the back. Place a **washer** over the hole and close the binding with the **counterpart of the book screw**. Tighten it with a flathead screwdriver.
5. Repeat the process for two more holes.
6. **Your updated collection book is ready!**
